Change Control Announcement # 016

Dear Customer,

Effective January 1, 2016 we will no longer offer Electro-Static Dissipative Neoprene polymer gloves. Our ESD Neoprene line will be removed in France and converted to another polymer to meet growing demand. With the recent introduction of our EPDM polymer gloves, we will now offer two Anti-Static glove options. The Anti-Static materials offered are High Performance Butyl and EPDM. Both High Performance Butyl and EPDM offer superior chemical protection and 3 years of shelf life, as opposed to 2 years of shelf life with our ESD Neoprene. Attached you will find the Technical Specification sheets for our EPDM and BHP materials.

I remain at your disposal for any questions.

Sincerely,

Taylor Farias
Sales Manager
